

Jillella Susmitha

+91 9398380104 | jillellasusmitha24@gmail.com | LinkedIn | GitHub | Guntur, Andhra Pradesh, India

SUMMARY

Computer Science student with hands-on experience in Python, Data Analytics, Machine Learning, and Large Language Models (LLMs). Skilled in data analysis, visualization, Prompt Engineering, RAG, and AI application development. Passionate about building data-driven and AI-powered solutions while continuously learning emerging technologies.

EDUCATION

Vasireddy Venkatadri Institute of Technology (VVIT)

B.Tech – CGPA: 9.28

Guntur, India

Sept 2023 – July 2027

AP Model School and Junior College

Class XII – CGPA: 9.7

Palnadu, India

June 2021 – May 2023

TECHNICAL SKILLS

Programming Languages: Python, SQL, Java, C, HTML, CSS, JavaScript

Database Management: MySQL, PostgreSQL

ML / AI / NLP: Machine Learning, Generative AI, Large Language Models (LLMs), Prompt Engineering

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Linux

Libraries & Frameworks: Flask, Requests, Pandas, NumPy, Scikit-learn, Matplotlib

Soft Skills: Problem Solving, Adaptability, Team Collaboration

EXPERIENCE

AI & Machine Learning Intern

IBM

- Developed a salary prediction system using Scikit-learn (Random Forest regression) with feature selection and hyperparameter tuning, achieving an R^2 of 0.91 and reducing prediction variance by 20%.
- Designed and implemented an end-to-end ML pipeline covering data preprocessing, feature extraction, model training, and cross-validation; cut model iteration time by 35% and delivered production-ready outputs.

High Performance Computing Intern

C-DAC

- Developed a VoIP traffic simulation module in Fortran using object-oriented programming concepts and G.711 codec modeling to estimate packet generation, bandwidth utilization, and network traffic across telecom city pairs.
- Integrated 5+ telecom computation modules (mapping, timezone, activity, affinity, and codec) to simulate packet-level IP communication and support telecom network capacity planning on an HPC Linux environment.

PROJECTS

AI Mail Triage System

- Engineered an LLM-powered email-automation tool using LangChain and prompt engineering to classify messages and auto-generate response drafts, reducing manual triage time by 60%.
- Exposed triage functionality via a Flask RESTful API; secured endpoints with OAuth 2.0 and iteratively evaluated LLM output quality to minimize classification errors.

Customer Churn Prediction

- Implemented a Random Forest classifier achieving 85% recall; resolved class imbalance with SMOTE, improving minority-class accuracy for targeted customer-retention strategies.
- Automated model evaluation with cross validation and feature importance analysis; visualized churn drivers to surface actionable business insights.

Airbnb Booking Data Analysis

- Cleaned and transformed raw booking records; produced pricing trend and customer behavior visualizations to support data driven decision making.

CERTIFICATIONS

Introduction to LLMs — NPTEL

Python for Data Analysis: Pandas & NumPy – Coursera

Data Science and Machine Learning – Udemy

Programming in Java – NPTEL

Web Development – Udemy
